

AI AUTOMATION & DIGITAL SYSTEMS CONSULTANT

Courtney Delaney

I help founders and established brands put AI to work on the parts of the business that quietly eat the most time — **intake, follow-up, content, admin, and reporting** — with systems that fit how they actually work.

 Dashboards Integrations Scheduled automations AI agents Websites & SEO

Most businesses don't have an AI problem. *They have a messy-middle problem.*

AI can't fix a process nobody has written down. That's why so many owners try a tool, get a few clever outputs, and quietly go back to doing it by hand.

SOUND FAMILIAR?

The business runs out of texts, DMs, and sticky notes

Leads go cold because follow-up depends on someone remembering

The same answers get retyped every single week

Reporting means copy-pasting between five tools on a Sunday

You bought AI tools. Nobody knows what they're actually for

Everything important lives in the owner's head

Adding one event or one new member means emailing your web guy

I help business owners make AI *actually* useful.

Before the automation, I organize the process — cleaning up the messy middle, building structure around the work, then creating systems your team will still be using six months from now.

- ✓ Process cleanup and SOPs before anything gets automated
- ✓ Backend dashboards your team updates without calling me
- ✓ Automation development, integrations, and scheduled workflows
- ✓ AI agents that handle the repetitive, judgment-light work
- ✓ Websites, SEO, content systems, and AI-assisted coding support

I optimize for time back, not tool count

The goal is never "now you use AI." The goal is fewer hours spent on work that never needed a human in the first place.

Everything is documented and handed off

You get SOPs, a walkthrough, and full ownership of every account and workflow. No black boxes, no dependency on me.

The right stack — yours, or a better one

Often your current tools just need to talk to each other. When one is the bottleneck, I'll say so and build the leaner replacement.

Clean up the messy middle first.

AI works better when the process is clear. Before building dashboards, automations, or agents, I identify the inputs, decisions, handoffs, approvals, and repeatable steps that make the system work — then automate only the parts that genuinely should be.

01

Organize

Map what actually happens today, gather the inputs, and find the noise, gaps, and duplicated effort.

02

Document

Write clear SOPs and define the decisions, approvals, handoffs, and who owns what.

03

Automate

Build the dashboards, automations, and AI agents on top of a foundation that makes sense.

04

Hand off

Train your team, document the fallbacks, and leave you owning every account, key, and workflow.

☆ Better systems. Fewer fires. More time back.

Six places AI reliably earns its keep.

These are the workflows I'm asked for most — chosen because they're high-repetition, low-judgment, and easy to measure.

Lead intake & follow-up

New enquiries get captured, qualified, drafted a reply, and chased on a schedule — so nothing goes cold while you're working.

Answers from your own docs

An assistant trained on your pricing, policies, and FAQs so staff and customers get consistent answers instead of guesses.

Content production lines

Research and briefs to drafts to a scheduled publishing queue — with a human approval step that stays in your control.

Reporting that writes itself

Numbers pulled from your tools each week, summarized in plain language, and delivered before you think to ask for them.

Data cleanup & enrichment

Deduping, tagging, formatting, and filling the gaps in customer records — the admin nobody wants and everybody postpones.

SOPs & onboarding docs

Turn how you already work into written process — drafted from recordings and notes, then edited down to something usable.

Everything in one place.

I build backend dashboards that give business owners a clearer view of what is happening across the business — without digging through notes, messages, and scattered tools.

- ✓ Tasks, approvals, and follow-ups
- ✓ Content calendars and production status
- ✓ SOPs, notes, and owner priorities
- ✓ Visibility first — so you automate the right things next

Build it once. Run it on a schedule.

I connect tools, organize data, and build automations that handle repetitive work — from follow-ups and reminders to recurring admin and reporting. Every workflow has an owner, an alert when it fails, and a documented manual fallback.

- ✓ Automation development and integrations
- ✓ Scheduled workflows and recurring tasks
- ✓ AI agents for repetitive business work
- ✓ Alerts, follow-ups, and reporting
- ✓ AI-assisted coding support

Fix the stack you have. Replace what slows you down.

If the tools you're paying for can do the job, I make them finally talk to each other. When they're the thing slowing you down, I'll say so — and build the leaner replacement. Every tool that stays or goes has a clear reason.

You own everything

Accounts, API keys, workflows, and documentation stay in your name from day one. If we stop working together, nothing turns off.

Technical SEO

The pain, and the number that answers it.

Counted from the live builds themselves — not projections, not a case-study average.

530 published articles and guides
across six live sites

PAIN “We never get around to publishing.”

Content runs as a production line — research and drafts assisted by AI, every piece edited before it ships.

1,700⁺ groomer listings kept current
across all 50 states and Canada

PAIN “Our data goes stale the week after launch.”

Collection, cleanup, and categorization run as a repeatable job instead of a manual spreadsheet chore.

7 products live in production,
not mockups or template previews

PAIN “Everyone shows me concepts, nobody ships.”

Every screenshot in this deck is a URL you can open right now and check for yourself.

6 different industries shipped — local service,
directory, DTC, subscription, SaaS, membership

PAIN “Nobody understands my niche.”

The process transfers. Intake, content, follow-up, and self-serve dashboards work the same whether the customer is a dog owner or a club committee.

American Puppy

A local dog-grooming website and content system designed around trust, clear services, local search, and a straightforward booking path.

- ✓ Conversion-focused website copy
- ✓ Service and breed SEO content
- ✓ Customer education blog system
- ✓ Clear path from browsing to booking

WHERE AI CAME IN

AI-assisted keyword research and content drafting kept a small local site publishing consistently — with every page edited and fact-checked before it went live.

Live homepage — American Puppy, St. Charles MO

[Open live site ↗](https://americanpuppystl.com)

Cat Grooming Directory

A niche directory and education platform that connects cat owners with groomers, practical guidance, and carefully positioned product resources.

- ✓ Directory strategy and information architecture
- ✓ Owner education and SEO content
- ✓ Groomer visibility and search experience
- ✓ Affiliate and shop content strategy

WHERE AI CAME IN

Listing data collection, cleanup, and categorization at directory scale — plus AI-assisted coding to build and ship the site itself.

Live groomer-search experience — 1,700+ listings across all 50 states

Hold My Letter

A sentimental direct-to-consumer brand built around future letters, warm messaging, clear product education, and a trust-centered customer experience.

- ✓ Brand story and offer positioning
- ✓ Website structure and customer journey
- ✓ Educational and conversion content
- ✓ AI-supported campaign development

WHERE AI CAME IN

Campaign concepts, email sequences, and product education drafted with AI, then rewritten in the brand's voice — sensitive, emotional copy always gets a human pass.

Newtown Men's Club

A club website with a members-only back office — so the committee posts its own events and manages its own roster, without a single email to a developer.

- ✓ Public site plus a private members area
- ✓ Self-serve event posting, editing, and scheduling
- ✓ Member records added and updated by the committee
- ✓ Written walkthrough so any volunteer can pick it up

WHY IT MATTERS

Volunteer-run organizations turn over every year. A site only survives that if the next person can run it without calling whoever built it.

WHAT THEY DO WITHOUT ME

Add an event

Title, date, venue, details — live on the site immediately

Add a member

New records and updates without touching a spreadsheet

Update the page copy

Edit in the dashboard, publish when it's right

Reach the membership

Announcements go out from the same place as the events

Routine updates never wait on a developer —
the committee owns the day-to-day.

Three more products, live in production.

Every case-study screenshot in this deck is the real site, captured as it runs today — including a consumer AI product I positioned and wrote end to end.

Moontuck moontuck.com

A personalized bedtime-story product — one ongoing chapter a night, delivered by email.

Product positioning • Website messaging
AI storytelling workflow • Parent-focused UX

Cautellus cautellus.com

An AI scam detector — paste a text, link, or screenshot and get plain-language risk scoring.

SaaS positioning • Product messaging
UX content • Education and trust content

The Digital Back Office thedigitalbackoffice.com

My own studio site — where the build, content, and managed-monthly offers live.

Brand and offer design • Site build
Content system • Application flow

Three ways to work together.

I take on a small number of engagements at a time, and every one is fixed-scope and quoted before work begins — built to the standard in the case studies you just saw.

START HERE

AI Opportunity Audit

About 1 week • Fixed fee

- We map how the work actually moves through your business today
- I rank every workflow by hours lost and ease of automation
- Ends with the written assessment shown on the next slide
- Includes one quick win built and running before we finish

MOST COMMON

Build Sprint

2–4 weeks • Scoped per project

- Pick one system: dashboard, automation set, or AI agent
- Built, tested against real cases, and connected to your tools
- SOPs, a recorded walkthrough, and team training included
- Failure alerts and a manual fallback documented for each workflow

ONGOING

Systems Partner

Monthly • Retainer

- I maintain and monitor what's already running
- New automations added as the business changes
- Content, SEO, and site work kept moving in the background
- A standing call so priorities never sit in your inbox

Not advice. A written assessment.

The AI Opportunity Audit ends with a report prepared for your business — every recommendation costed, sequenced, and tied to hours back per week.

- ✓ Every workflow plotted on an impact–effort matrix — quick wins first
- ✓ Six quick wins, each with the tool, cost, setup time, and hours saved
- ✓ A four-day plan you can start the same week
- ✓ The bottom line: monthly net ROI after tool costs

The questions worth asking.

Most AI projects don't fail because the technology can't do it. They fail because nobody agreed on what happens when it's wrong, who owns it, and how it gets handed over.

Here's where I stand — ask any consultant you're considering the same things.

Will this replace my team?

No. I automate the repetitive, judgment-light work so your people spend their hours on customers instead of copy-paste. Anything requiring real judgment keeps a human in the loop.

Where does my data go?

Into your accounts, under your keys. I'll tell you exactly which tools touch which data, and I configure business-tier settings so your content isn't used for training.

What happens when the AI gets it wrong?

Every workflow gets an approval step or a confidence threshold, an alert when it fails, and a documented manual fallback. Nothing customer-facing ships unreviewed by default.

Am I locked into you?

Never. You own the accounts, keys, and documentation from day one, and every build ends with a walkthrough so your team can run it without me.

Let's find the hours your business is losing.

Send me a short note about the part of your business that feels heaviest right now. I'll tell you honestly whether AI is the right fix — and if it isn't, I'll tell you that too.

01

Tell me the bottleneck

A few sentences about what's eating your week.
No brief or spec needed.

02

A 30-minute call

We walk through the workflow together and find
where the time actually goes.

03

A scoped proposal

Fixed price, clear deliverables, and a timeline —
before any work starts.
